Combining diacritics are prefix, dead-key style like é/ñ: type the ̀ mark, then the base (ɛ a → á); they stack. ̀◌◌ gives a mark's second form (ɛ◌n → creaky); where the two are values of one feature — advanced/retracted, apical/laminal — the second *replaces* the first rather than stacking. Spacing marks — length, tone, stress — are postfix: base then mark. ˆ and all superscripts: glyph then ɲz (̀◌◌z lowers, for subscripts). Rhoticity : vowel then ɲr (ə ̀◌r → ø). The 10 diacritics beyond the IPA — cedilla, ogonek, horn, ß and the rest — are on [/keys](#).

Click any symbol to hear it. Keystrokes: blue monospace beside each symbol; ◌-digits and trailing capitals are shifted; combining ̀ marks are typed before their base (dead-key style), spacing marks after.
