Combining diacritics are prefix, dead-key style like é/ñ: type the ʼ mark, then the base (ɥe a → á); they stack. ʼ ɥɿ gives a mark's second form (ɥɿn → creaky); where the two are values of one feature — advanced/retracted, apical/laminal — the second *replaces* the first rather than stacking. Spacing marks — length, tone, stress — are postfix: base then mark. ʼ and all superscripts: glyph then ɥz (ʼ ɥɿz lowers, for subscripts). Rhoticity: ɣ vowel then ɥr (a ʼ ɥr → ə). The 10 diacritics beyond the IPA — cedilla, ogonek, horn, ɓ and the rest — are on [keys](#).

Keystrokes: blue monospace beside each symbol; ɿ-digits and trailing capitals are shifted; combining ʼ marks are typed before their base (dead-key style), spacing marks after.
